

# **SITE EQUIPMENT SAFETY, SHORING AND TRENCH SUPPORT TRAINING**

We offer many different types of training courses in shoring and trench support.

Our first priority is to identify what type of Training you need.

Once identified, we can tailor our training to suit your specific requirement.

We have a fully equipped training centre where your staff can get first class training in comfortable surroundings that has three training rooms, kitchen, rest area, and an outside practical tuition area in which they can learn safely about our full range of trench support equipment. How to put it together, assemble our trench, drag and manhole boxes, safety rail systems, manhole frames, waler frames and how to use and install the equipment, correctly and safely and much, much more.

The course content consists of the following:

- (i) How to identify what equipment is required.
- (ii) How to put the equipment together safely.
- (iii) Excavation installation methods.
- (iv) How to do risk assessments when dealing with excavations.
- (v) What dangers the weather conditions pose.
- (vi) How to identify soil types, and the risks posed by water in excavations.
- (vii) Information gathering for temporary works designs, and their purpose.
- (viii) The huge ground pressures associated with deep excavations.
- (ix) Guidance on excavation upstands and the safety rail systems that are available.
- (x) All the relevant HSE and safety legislation when dealing with safety in and around excavations.

The courses available are as follows:

- (i) Site toolbox training.
- (ii) Basic equipment recognition course - Half Day
- (iii) SEL Level One – Half Day Classroom/Half Day Outside Training Area.
- (iv) SEL Level Two – One Day Classroom/One Day Outside Training Area.

All the candidates that attend the course will receive a Site Equipment Training Manual and an attendance certificate after they have successfully passed the fifteen question test paper.
